

Course: IENG 455 - Simulation by Digital Methods

Semester: Fall 2019

Credit hours: 3 credits

Instructor: Feng Yang

Contact info:

Email: feng.yang@mail.wvu.edu

Office location: ESB 335

Office phone: 304-293-9477

Cell phone: 304-906-7190

Skype ID: 3049067190

Assignment submission email:

ieng455@gmail.com

- ◆ The gmail account is for the purpose of collecting assignments only.
- ◆ **Please use the instructor's email address for any other matters.**

Description: Introduction to Monte Carlo simulation methods and their application to decision problems. Student identifies constraints on problems, collects data for modeling and develops computer programs to simulate and analyze practical situations. Interpretation of results emphasized.

Prerequisites: IENG 213 (Engineering Statistics), IENG 331 (Computer Applications in Industrial Engineering).

- ◆ Excel and word processing.
- ◆ Statistics, particularly the relationship between probability distribution functions and cumulative distribution functions; confidence-interval procedures based on the normal and t distributions; sample mean and variance.

Course Supplement: Additional course resources and materials will be posted on the course website.

Course Website: eCampus (<https://ecampus.wvu.edu>)

Course materials, homework assignments/solutions, projects, and labs will be posted on this website.

Softwares:

1. Arena: **It has to be Arena 15.10.00**

Available at the following link:

http://highered.mheducation.com/sites/0073401315/student_view0/arena_software_download.html

2. SIMTOOLS and FORMLIST: available at <http://home.uchicago.edu/~rmyerson/addins.htm>
 - ◆ *SIMTOOLS User Manual* is available at the course website under the folder <Software>, which includes the installation guidance and introduction of SIMTOOLS and FORMLIST.
 - ◆ Both softwares are installed on the PCs in the IMSE computer labs (ESB 305 & 355), ESB 225, 231, 239, and MRB 249.

Important Policies:

1. Grading Elements, Weighting and Scale:

Grade Element	Weighting	Grade Scale
Quizzes	30%	A: 90-100
Projects	30%	B: 80-89
Homework	30%	C: 70-79
Labs	10%	D: 60-69
		F: 0-59

2. Online Quizzes:

- ◆ Quizzes will be given online at eCampus at the beginning of some classes. Time of quiz will be announced at least one week in advance.
- ◆ Quizzes will take place in the computer classroom ESB G78B.
- ◆ The lowest quiz grade will be dropped.

3. Electronic Submission: All the electronic assignments (i.e., homework, projects, and labs) are required to be sent to the **Gmail** account.

- ◆ Please title your email “LastName_AssignmentName”.
Eg., “Yang_Project 1”, “Yang_Homework 1”
- ◆ If technical difficulties are encountered with the gmail account, please use the instructor’s email address.
- ◆ Please remember to CC yourself on all the emails submitting electronic assignments, and make sure that at least the email has been successfully delivered to your own mail box. Please keep your own copy of the submission until you have received the grade for that assignment.

Other Policies:

1. Assignment grading policy:

- Assignment turned in when due: grading starts at 100%
- Assignment turned in 1 day late: grading starts at 90%
- Homework turned in 2 days late: grading starts at 80%...
- Homework turned in 3 days late: grading starts at 70%...

— Homework turned in later - 0 on the homework

2. **Labs:** Some class time will be used as lab sessions, and the lab report is due by the end of the class.
3. **Working together on projects:** You are encouraged to discuss the design problems, but all programming and analysis is to be done in **a team of one, two or three**. Numerical results will differ depending on how you code your simulation, so comparing them is no guarantee, anyway.
4. **Regrades:** Regrades are obtained by submitting a written explanation to the instructor's email account within 48 hours of when the work was returned. Regrades will only be discussed *after* submitting the work in this manner.
5. **Make-up tests:** According to the department policy, no make-up tests are allowed. A student who misses a test without prior permission of the instructor must be assigned a 0 (zero). The secretary of the IMSE Department will have a telephone number where the instructor can be reached.

Course Goals:

1. To provide students with the basic concepts of simulation.
2. To provide students with hands-on experience in the application of a widely used, general-purpose simulation software.
3. To provide students with basic knowledge on the analysis of simulation output.

Student Learning Objectives:

Upon completing the course, the student will be able to:

- a) Recognize problems that can be modeled and solved using simulation techniques.
- b) Become familiar with the main elements and principles needed to build and implement valid and credible simulation models.
- c) Identify the input data needed for the model, perform proper statistical analysis, and select the input probability distributions.
- d) Generate random numbers and random variates.
- e) Perform basic statistical analysis on the output of the simulation models.
- f) Develop good simulation models using SIMTOOLS and ARENA.
- g) Perform a complete simulation study (problem definition and formulation, model building, data acquisition, model translation, model verification, model validation, model implementation, and analysis of the results.)

Course Contribution to Professional Component:

Engineering Science - 50%, Engineering Design - 50%

Course Relationship to Program Educational Outcomes:

The course relates strongly to the following program educational outcomes.

1. The course enables the students to acquire the ability to use modern and classical industrial engineering methodologies pertaining to simulation modeling (Outcome 1).
2. The course enables the students to acquire the ability to apply knowledge of math, statistics, and industrial engineering (Outcome 2).
3. The course enables the students to acquire the ability to design and conduct experiments, analyze and interpret data, develop implementation strategies, shape recommendations so that results will be achieved, and communicate findings effectively (Outcome 3).
4. The course enables the students to acquire the ability to work individually and on teams to identify, formulate, and solve problems using simulation and statistical analysis tools (Outcome 4).
5. The course enables the students to acquire the ability to design integrated systems (Outcome 5)

Course Topics (Note: This schedule is tentative and flexible)

- Review of probability theory and statistics relevant to simulation (1 week)
- Introduction to spreadsheet simulation and SIMTOOLS basics (1 week)
- Input modeling (1 week)

- Output analysis (1.5 week)
- System simulation and queueing basics (1 week)
- Arena topics: Chapter 2 & 3 (2 weeks)
- Arena topics: Chapter 4 & 5 (2 weeks)
- Output analysis for terminating systems: Chapter 6 (1 week)
- Output analysis for steady state system: Chapter 7 (1.5 week)
- Arena topics: Chapter 8 & 9 (2 weeks)
- Verification and validation & Managing simulation projects (1 week)

Statement on Social Justice:

West Virginia University is committed to social justice. I concur with that commitment. I expect to foster a nurturing learning environment that is based upon open communication, mutual respect, and non-discrimination. Our University does not discriminate on the basis of race, sex, age, disability, veteran status, religion, sexual orientation, color or national origin. Any suggestions as to how to further such a positive and open environment in this class will be appreciated and given serious consideration.

If you are a person with a disability and anticipate needing any type of accommodation in order to participate in this class, you must make appropriate arrangements through Disability Services (293-6700). They will identify the nature of the accommodation your disability requires.
